PROJECT INTRODUCTION

The self-evident need of honesty, integrity, transparency, and openness are core values that should be present within the crypto space. This is extremely important when investing your hard-earned money towards a better future for you and your family. As investors, we have been scammed by people that want to ruin your life so that they can enrich theirs. Like you, we are tired and frustrated at the prevalence of this and we wanted to do something about it. For this reason, we created UltraViolet Token, a stealth-launched, fair-launched, deflationary, community-driven, decentralized finance (DeFi) project on the Binance Smart Chain (BSC). It is managed and owned by an honest, fully doxxed team of business professionals that want to improve the quality of life for everyone who wants to join us on our journey.

We believe that community is the main strength of any project, and that strength starts with making every investor a team member and contributor to our project. When people invest in UltraViolet, they become a part of the family. Family members will be provided an equal opportunity to participate and be heavily involved in the success of the project. We want to empower the people to be in control of their investment and create opportunities for wealth. They are also awarded with solid tokenomics, such as a 100% locked liquidity pool, more than 60% of the total supply burned, every transaction generating passive income via frictionless redistribution (reflections), and every buy/sell gradually increasing the price floor of the liquidity pool via acquisition.

UltraViolet is an ever-changing and evolving project, beginning as a "meme" token, transitioning to a charity token, and the final stage goal of becoming an ecosystem with multiple use cases and added benefits to the investor. It will hold value, serve a purpose, and continue to be supported by a professional, dedicated team that is committed to a long-term project.

The name "UltraViolet" is derived from the token logo, which is an original character (OC) designed by JusstAddy. The rights and ownership was purchased by an artist known as Jackie Jackal. The character is a unique breed of dinosaur, known as a mochi-raptor, and exists as a main character in multiple origin stories that can be found on Wattpad.

THE PAST

In April 2021, the initial conceptualization for a token project was discovered and founded. Three crypto enthusiasts were sitting in a corporate office, discussing scams and loss suffered while investing in crypto assets. They came to the conclusion of putting together funds to start their own project... a project free of scams and deceit.

In June 2021, the founder and 2 developers created the contract, built a website, and commissioned social media platforms (Instagram, Twitter, Reddit, Telegram, YouTube, Twitch, Discord, Facebook).

In July 2021, the team attempted to raise funds for the liquidity pool via initial coin offering (ICO) on the project website, which resulted in a fail. The second attempt at raising funds was through an ICO on Bounce Finance, which also resulted in a fail. It was determined that these methods used to raise funds seemed like a scam from the perspective of an investor with little knowledge of the project.

In August 2021, a final attempt of raising funds was launched through private investment among friends, family, and co-workers. The result was a success as we were able to raise \$30,000 during a 3-week campaign.

UltraViolet finally launched on Friday, September 17th. Since the launch, there has been minimal growth to the token value. The main contributors to the growth has been the increase in value of our trade pair (BNB) as well as early investors that believe in the project. However, the launch itself and the initial phase of operation did not meet expectations. Some contributing factors include:

- Marketing: The team does not have funds for paid marketing on popular sites.
- Website: Has been designed twice and did not meet the professional standard on either attempt.
- Meme Theme: It's tough for projects to survive as a meme, unless it has unlimited funds for marketing. That means it's most likely run by scammers.
- Whitepaper: The initial publication was subpar and did not include enough transparency. It needed to look more professional.

The project was in need of a redesign and overhaul if it was to survive. As a result, the team decided to move forward with a plethora of changes. This includes website redesign, burning more of the circulating supply, whitepaper revision, team doxxing, changes to transaction fees, rework of the roadmap, and developing solid use cases (utility).

THE PRESENT

UltraViolet currently positions itself as a meme token. This is due to the simple fact that our project did not initially launch with a large budget and could not introduce an ecosystem of applications on the first day. As of today our project is providing a single use case/utility, which is the transaction reflections. For every buy/sell/transfer transaction, 2% is taxed and redistributed, providing passive income to holders.

The executive team at UltraViolet held a meeting in November, 2021 and collaborated with a single goal in mind... how can the project move forward and sustain positive results to investors without a large budget in the early stages of our token existence? The answer was to deliver low-cost utility that would also bring in potential investors through free marketing. We made the determination to implement 2 new use cases. In order to accomplish this new initiative, the project would have to transition and evolve from its current theme.

The first new use case will be donations to life-changing charities with large communities. In order to accommodate this new utility, the project's posture of meme will soon change to a charity token within the next few months from the whitepaper publication date (February-March 2022). This use case will focus on 2 main groups:

- World Missions: People from around the world answer the call to missions. Often times they are sent to plant churches in places that are considered impoverished or developing. They are in need of financial support as they conduct their mission out in the field. We will partner with organizations and churches that support these missionaries.
- United States Military Veterans: Millions of people serve in the military. After military life, many transition and integrate into the commercial sector. However, there are many that suffer from mental health, physical health, and other difficulties that can make life challenging. We will partner with organizations that support the nation's military veterans and their families.

THE PRESENT (Cont.)

Another use case that is about to be established will be the "Buy and Burn" utility. The UltraViolet community will propose another BSC project to invest in. The purchase amount will vary on how much is in the lottery wallet at the time of procurement. The executive team will purchase the token and hold the bag, sell the token at a substantial profit, use the profit to purchase UVT, and burn the supply that was purchased. This will not only increase LP value, but also remove more circulating supply. The challenge will be finding legit BSC gems.

Our website has been upgraded by a professional web design company known as Wade Michael Design (https://www.wademichael.com). They are a reputable, trustworthy business that produces quality work. Another example of their work is the Solarwind Token site (https://solarwindtoken.com).

The project whitepaper has been republished. The publication highlights more transparency about the progress of the project as well as future vision and goals of the team. Some other major highlights of the paper include:

- Fully doxxed team: Finally, a meme token with a fully doxxed team of real people. The executive team is 5 people with a combined 70+ years of experience in a professional business environment, ranging from Networking, to Marketing, to Cybersecurity.
- Finer granularity on tokenomics: The previous whitepaper was vague and did not include enough information, to include purposes of project wallets, or the locks on liquidity pool or developer wallets. This has now been fully disclosed. Note that the actual transaction hashes and wallet addresses are posted on the "Useful Information" page, allowing an investor to conduct their own research.
- Comprehensive roadmap: The roadmap is now upgraded to a comprehensive 3-year plan with proper milestones. The roadmap will continuously be updated and republished along with any updated releases to the whitepaper. Furthermore, there will be a roadmap status on the official website.
- Other useful information: We wanted to provide a central location of information that would be beneficial to the investor for DYOR and transparency. This is the purpose of the useful information section. The team will update this section as necessary.

THE FUTURE

The immediate future will bring exciting utility to the project. We will establish partnerships with reputable organizations that support world missions and military veterans. Not only will our donations support a good cause, but our project will gain a lot of visibility within those major communities. We will also begin the "buy and burn" use case, which will allow our project to gain visibility with other projects and crypto communities. This could lead to partnerships with other solid projects and their associated teams.

The executive team will submit the UltraViolet project for a full Techrate audit in Q1 of 2022. A full audit with publishing costs \$1900 and we are currently raising funds for that to happen. Once the appropriate revenue is obtained, we will proceed with the Techrate audit. Additionally, In 2023 we will undergo a full Certik audit, which costs a substantial amount more.

UltraViolet will be listed on CoinMarketCap and Coingecko in early 2022. This will be a great opportunity to attract more waves of investors and continue to pump the price of the token. The team will also pursue other reputable listings in order to further expand visibility.

If we can produce the level of success that we are anticipating, then the next phase of operations will be to partner with more agencies as well as establish listings on smaller tier exchanges. This will allow us to branch out to more investors and add more stability to the project.

The next utility to bring into the project would be a merchandise store. The store would be available on the official website and all items would be available for purchase with UVT as the currency. Merchandise would be purchased by connecting the buyer's wallet to the site. As purchases are made, profit will be distributed to holders in a specific manner that is yet to be determined. Additional details will be announced as this concept matures. The site will also play host to advertising, generating another source of income for the project and its holders. The daily volume of website visits will determine the price point.

THE FUTURE (Cont.)

After all of our previously mentioned goals are met, the UltraViolet project will evolve into its last phase, becoming an ecosystem with multiple use cases. A few major milestones will happen:

- An official UltraViolet company will be established and a team will be hired. This will allow for full-time, dedicated people to focus solely on our success.
- Applications will be developed and brought into the ecosystem, providing additional utility and revenue to holders. The applications will be tailored towards unique solutions that will help us stand out from the other projects.
- Our last goal in this phase will be to get listed on a major Tier 1 centralized exchange.
- Additional milestones and goals will be determined at a later date.

The end game is to become a top-100 ecosystem with a portfolio of assets that bring value to both the crypto industry and the investors of UltraViolet. The team believes that we are positioning ourselves in a manner that can get us there. It is now up to the community to agree and join us on our journey

Our future at UltraViolet is very promising. The ceiling is high and the return on investment can be huge. The team is focused and dedicated on delivering success to this project. We will not become complacent. We will not become stagnant. We will not accept failure. We are UltraViolet. It's time to let everyone know who we are!

Vinny Piperato, CISSP
Chief Executive Officer (CEO)
Founder, Investor
Vinny@ultraviolettoken.com

- Father, husband, and military veteran
- Certified Information Systems Security Professional
- Served in the United States Army as a Non-Commissioned Officer.
- Graduated with honors at Saint Leo University
- Recipient of multiple military and commercial awards

Vinny has worked in the Department of Defense for over 20 years, to include government contract positions at Central Command (CENTCOM), Special Operations Command (SOCOM), and European Command (EUCOM). The honor and privilege of being a team member within these large agencies has allowed him to work alongside some of the most professional people that the country has to offer. This has provided Vinny with invaluable knowledge and skills when it comes to Fortune 500 business. Now it's time to take the experience and apply it to an industry in need of professional and honest entrepreneurs that can showcase the true potential of investing in crypto assets.

Joe Prier
Chief Operating Officer (COO)
Co-Founder, Investor
Joe@ultraviolettoken.com

- Co-Founder of UltraViolet Token
- Active Military Service Member
- Honor Graduate
- JROTC Drill Team European Champion

The youngest member of the executive team. However, don't let his age fool you. Joe has already accomplished more in his life than the majority of his peers, which makes for a very high ceiling when talking about his potential for success. He has been fascinated by the crypto industry since 2014, leading to extensive personal study and observation. He has been involved in UltraViolet since day 1. He wrote and published the UVTIDO contract that was used for public presale. He created the original website from scratch. Not only is Joe's current position in the military teaching him about leadership, but he also had the privilege of living with a successful military leader for 18 years, allowing him to learn and grow from a great mentor.

Jordan Lazarus
Chief Technology Officer (CTO)
Investor
Jordan@ultraviolettoken.com

- Husband, Musician, and Information Technology Consultant
- Data Analytics & Business Intelligence Professional
- Graduated from Christ University

Data is the new oil, and proven to be very invaluable across the globe. It has redefined the way businesses work and function. Jordan has been working with data for over 12 years in the modern IT Industry, providing Data Intelligence Solutions for Global Clientele like Mercedes Benz, Robert Bosch, Adidas and Unilever. Living and working across Europe and Asia with multicultural teams, Jordan has gained a wide range of Sector Knowledge in Finance and Controlling, Automotive and Retail industries. Managing multiple teams to help establish various Business Intelligence and Data Analytics Platforms with complete focus on Customer Satisfaction and Cost Efficiency.

Brian Cutshall
Chief Financial Officer (CFO)
Investor
Brian@ultraviolettoken.com

- Retired Army Veteran of 23 Years
- Business Owner and Entrepreneur
- Director of the Radcliff Small Business Alliance
- Bachelors in Operations and Project Management

Brian has had the honor of serving his country alongside some of the finest men and women in uniform for over 23 years. Throughout this journey, he has developed and perfected invaluable skills, such as leadership, management, human resources, and finance. After retiring from the military, Brian started his own small business. Today, he continues to grow the business as well as strengthens relationships with the local communities. He has recently been given the privilege of serving as a director of the Radcliff Small Business Alliance, which is known for assisting small businesses in the local community to help them reach their full potential. Brian is a true entrepreneur at heart with a great work ethic.

James Gagne
Chief Marketing Officer (CMO)
Investor
James@ultraviolettoken.com

- Father, Husband, and Military Veteran
- Served in the United States Army National Guard
- Several Years of Sales and Marketing Experience
- Strong Familiarization with IT Networking and Security

Upon graduation of high school, James went on to become a soldier in the National Guard for 4 years. During these 4 years he learned and ultimately excelled in teamwork, dedication, camaraderie, and attention to detail. After his service, James went into the flooring business as an installer. A few years later he would be promoted to sales and marketing. His tenure in marketing has provided James with those invaluable skills that taught him the value of taking care of the most important asset in a company... the customer. Now his career journey lands him here at UltraViolet. He is here to apply his knowledge and contribute to the success of our project.

OUR TOKENOMICS

- \$UVT contract was created and deployed with a maximum supply of 100,000,000,000 (100 billion) tokens. There is no minting capability.
- 66,000,000,000 (66 billion) tokens have been burned. See the Useful Information section on page 16 for transaction hashes.
- Out of the remaining 34,000,000,000 (34 billion) tokens:
 - 18,000,000,000 (18 billion) sent to PancakeSwap for initial liquidity pool.
 - 10,000,000,000 (10 billion) provided to private investors.
 - 4,000,000,000 (4 billion) in a reserve wallet saved for future operations.
 - 2,000,000,000 (2 billion) is owned by the developers.
- Transaction fees are as follows for every Buy/Sell/Transfer:
 - 5% is automatically added to the liquidity pool, gradually increasing the price floor.
 - 2% is reflected to our holders based on the percentage of tokens held in their wallets.
 - 1% is sent to the "lottery" wallet that will be used for community giveaways.
- The large reserve wallet will be used to pay for things such as exchange listing fees, the development of our future platforms and applications, major marketing, charity donations, and partnerships. Once the project is matured and self-sustaining, any remaining amount of tokens within this wallet will be burned, further reducing the circulating supply.
- The liquidity pool is locked for 5 years.
- The CEO will institute a program to buy back private investor tokens. Any procured tokens will be burned, reducing the circulating supply.

PROJECT ROADMAP (2021)

Conceptualization of UltraViolet

Create and Deploy the Token Contract

Write and Publish the White Paper v1.0

Launch of the Official Website

Launch the Telegram Social Channel

Launch the Twitter Feed

Launch the Instagram Feed

Create the Twitch Channel

Create the Youtube Channel

Create the Github Site

Purchase and Operationalize Team Email Capability

Launch Presale ICO (UVT Website and Bounce Finance)

Launch Private Presale

Stealth Launch the Token on PancakeSwap

Lock the Liquidity Pool

Write and Publish the White Paper v2.0

Enhance and Republish the Official Website

Doxx the Executive Team

Create the Facebook Group

Enhance the Telegram channel

Establish Partnership #1

PROJECT ROADMAP (2022)

Establish Project Utility #1 (Buy and Burn)

Establish Partnership #2

Create and Execute Marketing Campaign

Have the Token Contract Audited by Techrate

Establish Project AMA Schedule

Get Listed on CoinMarketCap

Get Listed on Coingecko

Hit Milestone of 1000 Twitter Followers

Hit Milestone of 1000 Facebook Group Members

Hit Milestone of 1000 Telegram Channel Members

Hit Milestone of 1000 Token Holders

Get Listed on a 2nd Small (Tier 2 or 3) Exchange

Establish Project Utility #2 (Charity)

Establish Partnership #3

Get Listed on a 3rd Small (Tier 2 or 3) Exchange

Hit Milestone of 10000 Twitter Followers

Hit Milestone of 5000 Facebook Group Members

Hit Milestone of 5000 Telegram Channel Members

Hit Milestone of 10000 Token Holders

Establish Partnership #4

Establish Project Utility #3 (Merchandise Store)

PROJECT ROADMAP (2023)

Prepare the Token Contract for Tier 1 Exchange Listings

Establish Project Utility #4 (Application)

Hit Milestone of 20000 Twitter Followers

Hit Milestone of 10000 Facebook Group Members

Hit Milestone of 10000 Telegram Channel Members

Hit Milestone of 25000 Token Holders

Establish Partnership #5

Get Listed on our 1st Tier 1 Exchange

Have the Token Contract Audited by Certik

Establish Project Utility #5 (Application)

Hit Milestone of 50000 Token Holders

Hit Milestone of 100000 Token Holders

Establish UltraViolet LLC/GMBH Business Model

Hire the UltraViolet Team

(Reserved for future business)

CLOSING REMARKS

On behalf of the UltraViolet CEO and the rest of the team, we want to thank you for your interest in our project.

There is no success without the community, which is why we will do whatever we can to serve and protect you.

We want to let you know that we are not going anywhere and are here to stay for a long time. Our goal is to transition to the crypto industry full time.

Join us on our journey. Together we can make UltraViolet a cryptocurrency project that is known to the world.
